---

Jamie, that makes complete sense. Thank you for the feedback and for the careful read you gave my articles.

So do you think it is possible that someone who passes 100% of the time would have less suicidality? Is it possible that those who are blocked and then transition will have good long-term outcomes?

I think it might be possible, but then we'll never have a good control group to know whether they could have been fine without losing their fertility. I also suspect we will see major health problems w Lupron and long-term HRT.

Thanks again!

Hi Lisa,

I wanted to comment on this excerpt from the Tandfonline article.

"Although this likely is true some of the time, post-transition transsexuals are more likely to "pass" as the target gender, and therefore ought to be less subject to discrimination."

I find myself unable to agree on this and I'll cite some references why.

[http://www.thetaskforce.org/static\\_html/downloads/reports/reports/ntds\\_report\\_on\\_health.pdf#page=3](http://www.thetaskforce.org/static_html/downloads/reports/reports/ntds_report_on_health.pdf#page=3)

As noted in the Taskforce survey only 21% of trans community can pass all the time.

Which gets to the heart of blocking puberty, it's not to buy time as you well know, it's to produce better cosmetic outcomes because of the failures of adult transitions. The monsters realized how bad adult transitions were failing to convince the public that their patients were the opposite sex, so they turned to blocking puberty to improve the outcomes.

There's proof of that here in a rare admission from a gender clinic.

"He said in early September that offering services through pediatric care allows patients to **start treatment early enough for the best cosmetic outcome**, reducing chances of discrimination and allowing for better integration into society – according to the Associated Press."

Please don't take this as negative feedback. I think both of your recent articles were great contributions in moving this discussion forward and hopefully in helping to stop this alarming trend.

I hope yo are well.

Jamie
